## Rotations on the Coordinate Plane Notes

Name $\qquad$
Rotation: a transformation performed by "spinning" the figure around a fixed point (known as the center of rotation). Since the new image and the original image are congruent, it is considered a rigid transformation.

## Examples:

1) How has the object been rotated around the origin?

How do the new ordered pairs relate to the original ordered pairs?
3) How has the object been rotated around the origin?

How do the new ordered pairs relate to the original ordered pairs?
2) How has the object been rotated around the origin?

How do the new ordered pairs relate to the original ordered pairs?
4) Rotate the object $90^{\circ}$ counterclockwise around the origin. What are the new coordinates?

1) How has the object been rotated around the origin?

How do the new ordered pairs relate to the original ordered pairs?
3) Rotate the object $180^{\circ}$ counterclockwise around the origin. What are the new coordinates?

2) Rotate the object $90^{\circ}$ counterclockwise around the origin. What are the new coordinates?

4) Rotate the object $90^{\circ}$ clockwise around the origin. What are the new coordinates?
